

=====

ARGA — GOVERNED INTELLIGENCE INFRASTRUCTURE (PROPOSAL B)

Adaptive Resilience Governance Architecture

=====

EXTERNAL SYSTEMS

Enterprise Data | Financial Systems | Sensors
Regulatory Inputs | Human Operators

TRUSTED DATA LAYER

Validated Data Intake
Integrity Verification
Evidence Capture

SYSTEM COMPUTATION CORE

State Construction
Deterministic Signal Processing
Risk / System Metrics

AI INTELLIGENCE

Context Analysis
Hypothesis Generation
Simulation & Scenario Modeling
Action Proposal

Policy Enforcement
Operational Constraints
System Integrity Validation

(Only validated decisions proceed forward)

Authorized Automation
Human Decision Support
Operational Workflows

System Observability
Decision Traceability
Continuous Learning

=====

CORE PRINCIPLE

Artificial intelligence generates candidate decisions.

Governance systems determine whether execution is permitted.

=====
